TITLE : SKIN PREPARATION FOR EXTERNAL USE

ABSTRACT : PROBLEM TO BE SOLVED: To obtain a skin preparation for external use capable of extremely improving not only a were rough skin, but also rough skin symptoms associated with atopic dermatitis, drying skin diseases represented by eczema of a housewife or the like, and inflammatory skin diseases, and effective for treating or preventing these rough skin symptoms.

SOLUTION: This skin preparation for external use contains a heparinoid and a betaine, and further an antiinflammatory agent. The heparinoid used in the skin preparation for external use of the present invention is a polysulfate of a mucopolysaccharide, and the polysulfate of a mucopolysaccharide described in the non-official drug standard can be used suitably. The betaine used in the skin preparation for external use of the present invention is an N-trialkyl substitution product of an amino acid, and concrete examples include glycine- betaine, γ -butyrobetaine, β -alanine-betaine and glutamic acid betaine, and especially glycine-betaine or the like out of these compounds is more suitably used.
